If you have **high blood glucose**, make notes in your log and talk with your health care team about whether you need to change your meal plan, physical activity, or diabetes medicines.

**Having low blood glucose means** that your blood glucose level is too low (below 70 mg/dl). Low blood glucose can be dangerous. Symptoms include being:

- hungry
- light-headed or confused
- nervous and shaky
- sleepy

• sweaty

If you think your blood glucose is too low, check it. If it's below 70 mg/dl, have 1 of these items right away to raise your blood glucose level:

- 3 or 4 glucose tablets
- 1 serving of glucose gel (the amount equal to 15 grams of carbohydrate)
- ½ cup (4 ounces) of fruit juice
- ½ cup (4 ounces) of a regular (not diet) soft drink
- 8 ounces of milk
- 5 or 6 pieces of hard candy
- 1 tablespoon of sugar or honey

After 15 minutes, check your blood glucose again. If it's still below 70 mg/dl, have another serving. Repeat these steps until your blood glucose is at least 70 mg/dl.
